**Abstract** Presence of bioactive substances in detergents is an up to date request for textile industry and for domestic users, for a final treatment of textiles (cotton, silk) and for good results in domestic washing (clean of stains, white effect, antimicrobial effect). The work consists in obtaining of some active and ecological substances for detergents industry and achievement of detergent compositions with new and good qualities (for washing and protection of environmental and users).

*Keywords:* ecological detergents, bioactive substances, alkylglucoside.
