Abstract. European Commission is more and more looking for excellence, therefore financing different domains of activities in order to develop a strong collaboration relationship within European institutions from different countries. All these grants are aiming to generate broad networks between the partners ready to agree on common development subjects of interest. Since 1998 Romania joined the Socrates-Erasmus program, dedicated to the educational part of the social-economic development and took part to different projects either as coordinator or as partner. This paper presents the experience that Transilvania University of Brasov have reached coordinating different Curricula Development projects since 2000.

Keywords: curricula development, environmental protection education, applied chemistry.
